

Let's talk about *dreams* for our loved ones for a second ... think about the dreams you have for your children, grand-children, nieces, nephews. You may have come up with things like play a sport, get married, go to prom, have friends, be included, become an XYZ when they grow up.

We had these same dreams for William before he even entered this world. After receiving his diagnosis, those dreams were crushed with the hammer of our new reality.

As we settle into our diagnosis, we are building new dreams for him while holding on to the hope that some of our original dreams will one day come true!

What stinks is that many of our dreams are not possible unless there is a drug that works its way from the lab into a human ... successfully!

(BTW: this LAB > HUMAN process is extremely complex & expensive)

We have been in this community 3.5 years and it's like running a marathon while playing chutes and ladders. While we have 3 active human clinical trials right now, we have some pharmaceutical companies pulling their Angelman syndrome programs due to their strategic realignment, the economy, etc.

Nevertheless, we must persist through the trials and tribulations if we want a brighter future for William. Which is why we continue to ... FUNDRAISE!!

Whether you can attend in person or support us virtually, we look forward to our **1st annual If Will CAN, We CAN event @ Surly Brewing Co on Tues, August 15th at 6:00pm!**

Buy tickets or donate today!
(We are 64% full already)
